SUMMARY

Information Technology graduate who enjoys turning complex problems into practical, scalable software solutions. Experienced in designing backend systems with Python, Django, and REST APIs while exploring AI-powered applications using modern LLM frameworks. Driven by curiosity, clean engineering practices, and continuous learning to build software that is reliable, maintainable, and impactful.

EDUCATION

Bachelor of Technology in Information Technology

Anil Neerukonda Institute of Technology and Sciences

CGPA: 9.43/10.00

June 2022 – May 2026

Affiliated to Andhra University

Intermediate (MPC)

Tirumala Junior College, Rajahmundry, Andhra Pradesh.

Marks: 967/1000 (96.7%)

June 2020 – April 2022

SKILLS

Languages	Python, Java
Core	Data Structures & Algorithms, OOP
Frameworks	Django, Django REST Framework, FastAPI, React.js, Streamlit
AI/GenAI	LangChain, Hugging Face, OpenAI API, RAG, FAISS, ChromaDB
Databases	PostgreSQL, Oracle Database, MySQL, MongoDB
Tools	Git, Postman, Linux, VS Code
Cloud	AWS (Basic)

PROFESSIONAL EXPERIENCE

Python Developer (Full-time)

Cyethack Solutions Pvt Ltd.

Sep 2025 - Present

New Delhi · On-site

- Architected a **remote-first auditing platform** designed for 100K+ endpoints, prioritizing highly efficient code-base structures to ensure stable, real-time security telemetry monitoring.
- Designed and optimized high-throughput backend services using **Django, Django REST Framework, and WebSockets**, emphasizing modular and maintainable code for secure, scalable API delivery.
- Developed a **high-performance, multi-threaded audit parsing engine** to process concurrent logs, drastically improving system responsiveness and backend processing efficiency.
- Optimized database architecture and query execution strategies, driving a **6.7× improvement in throughput** (increasing from 30K to 200K+ audits/day) via advanced indexing and refined data modeling.
- Developed a **cross-platform system tray application** featuring an interactive dashboard that provides real-time visibility into machine-level security violations and compliance scores, empowering end-users to proactively rectify vulnerabilities and maintain system integrity.
- Built comprehensive security analytics dashboards for patch management and vulnerability analysis, providing intuitive, actionable insights into remote system health and security posture.

Python Developer (Remote Intern)

BYTO

May 2025 – Aug 2025

Remote

- Engineered scalable Django REST Framework APIs to support complex logistics workflows for 200+ clients, utilizing best practices for clean, efficient backend development.
- Enhanced PostgreSQL database performance by 30% through strategic indexing and query optimization, directly improving API response latency in a remote-distributed environment.

- Maintained secure, production-grade user authentication modules and seamlessly integrated multiple third-party service APIs into the core application codebase.

PROJECTS

RoadGuard: Pothole Detection & Road Safety System  React Native, Django REST, YOLOv8, OpenCV

B.Tech Major Project

- Built a role-based reporting and analytics platform for citizens and road authorities to track critical road hazards.
- Developed Django REST APIs with automated Swagger documentation, featuring server-side filtering by severity and location.
- Integrated a YOLOv8 and OpenCV machine learning pipeline to detect potholes and automatically plot events on live map views.
- Implemented mobile features including proximity-based alerts, navigation routing, and real-time live-stream hardware integration.

Reddit Review Analyzer  FastAPI, React, TypeScript, LangChain, FAISS, Playwright

AI-powered product review aggregator and RAG synthesis engine

- Architected a React and FastAPI application featuring a high-speed Playwright crawler to extract Reddit reviews in under 10 seconds
- Designed a localized RAG system with FAISS indexing and LangChain to enable semantic context retrieval on unstructured discussions
- Integrated Llama 3 via serverless Hugging Face endpoints to compile product comparisons, supporting interactive multi-turn QA sessions

LLM Based Form Automation  FastAPI, React, Selenium, Docker, OpenRouter API, Python, JS

AI-powered tool for auto-filling online forms

- Built a full-stack web app with FastAPI and React that parses uploaded resumes to extract user details
- Developed a JavaScript DOM scraper to identify form fields and used Selenium to automatically fill them
- Implemented a consensus voting system using multiple LLMs via OpenRouter to generate accurate answers

ACHIEVEMENTS

3rd Place – Brainovision 24-Hour Hackathon 2024: Built AI Tutor using GPT for personalized learning

DECLARATION

I hereby declare that all the details furnished above are true to the best of my knowledge and belief.
